HYACINTHS IN MIXTURE.

FOR BEDS OR BORDERS.

Cannot be too strongly recommended to all admirers of spring gardening. The varieties selected, in the different colours, are such as will bloom at one time, and produce a display so rich and varied, combined with delicious perfume, that no other spring flower can equal.

		Per 100. s. d.	Doz. s. d.

187	**SINGLE RED**		
188	**SINGLE WHITE**		
189	**SINGLE YELLOW**		

HYACINTHS, ROMAN.

Are most suitable for early forcing, producing their neat and pretty spikes of flowers from November to January; they are well adapted for bouquets and vases, and are very fragrant.

		s. d.
190	Per dozen	4 6
191	Per 100	32 0

NARCISSUS.

POLYANTHUS NARCISSUS.

These have the fragrance of the Jonquils, and are useful for in-door decoration; they are of easy culture, and can be forced early. The *Double Roman* is very desirable for early blooming; two or three bulbs are recommended to be planted in one pot, so as to produce a fine mass of flowers.

CYCLAMEN PERSICUM.

Too much can scarcely be said in favour of the superb varieties of this plant, of which the old *persicum* is the type, whether they are regarded as objects for the ornamentation of the greenhouse conservatory, or for table decoration, for which their compact floriferous character eminently fits them. The flowers are also extremely useful for bouquets, and when plucked, if kept in water, they will last in freshness and beauty some weeks—indeed, almost longer than any other flowers with which we are acquainted.

30*s.*, 42*s.*, and 60*s.* per dozen, according to the varieties and size of bulbs.

	Each—s. d.
Cyclamen Coum, bright red	1 6
Cyclamen Europæum, red, sweet-scented

GLADIOLUS CRUENTUS.

A beautiful species from Natal, producing a spike of large flowers of a bright blood red colour, the upper segments uniformly coloured, and the lower smaller ones crimson at the base and scarlet at the apex. The two lateral segments of the lower lip are marbled about half way down with a white zone dotted with crimson, which on the exterior edge runs out into a long point. 3*s.* 6*d.*

GLADIOLUS PURPUREO-AURATUS.

This new species has been introduced from Natal ; the flowers are pale golden yellow, with a large purple blotch, which is broader at the apex, on the disc of each of the two lower segments. Spikes nearly a foot in length, and giving ten to fifteen flowers each.

This remarkable and distinct species has been figured in the *Botanical Magazine*, tab. 5,944. 2*s.* 6*d.*

ASTILBE BARBATA.

GENERALLY, BUT ERRONEOUSLY, KNOWN AS

HOTEIA JAPONICA, AND SPIRÆA BARBATA.

Cannot be too highly appreciated as a decorative plant for early forcing, its pretty erect shining green foliage, surmounted by numerous beautiful and graceful panicles of white inflorescence, giving the whole plant an elegant appearance, and rendering it at once most pleasing and useful for decorative purposes.

Strong imported clumps, 9s. and 12s. per dozen.

SPIRÆA PALMATA.

One of the most beautiful hardy plants in cultivation, with deep purple red stems and branches, and crimson purple broad corymbs of flowers. It is a native of Japan, and was discovered and introduced

IRIS.

ENGLISH (I. anglica or Xiphioides).

For brilliancy of colour and fine vigorous foliage the English Iris takes rank among the handsomest of flowering bulbs. They greatly resemble the Spanish Iris in style of growth, attaining a height of about 2 feet, and produce, during June and July, a succession of large and beautiful flowers.

LILIUM TIGRINUM FLORE-PLENO.

68 This attractive variety produces beautiful double flowers of a bright orange scarlet colour; the segments are thickly studded with dark brown spots except at the tips, which are recurved. It has been introduced from Japan, and is a distinct and extremely handsome variety. It can be strongly recommended as one of the very best Lilies in cultivation. For illustration, *vide* page 13. 3*s.* 6*d.*, 5*s.*, and 7*s.* 6*d.*

69 TIGRINUM, 9*d.*

70 TIGRINUM FORTUNEI, 1*s.* 6*d.* & 2*s.* 6*d.*

LILIUM TRIGRINUM JUCUNDUM.

71 This bright and cheerful looking Lily has been imported from Japan. It has erect green stems, and linear lanceolate glossy leaves. The flowers, of which several are borne on a stem, each spring from the axil of an oblong-ovate limb, and are nodding. The perianth segments are spreading and moderately recurved, of a light cinnabar red, marked in the lower half by scattered black dots, furrowed towards the base, and then bearing a few papillæ. The filaments and style are orange coloured, and the anthers chocolate red. 5*s.*, 7*s.* 6*d.*, and 10*s.* 6*d.*

DOUBLE TUBEROSES.

(POLYANTHES TUBEROSA.)

American growth, which are of better quality than the Italian and give more flowers. The bulbs of this beautiful and fragrant flower will not be sent out before the middle of December.

AMARYLLIS PYRROCHROA.

A fine stove bulb from Columbia, producing umbels of flowers, which expand to a breadth of about ve inches, and are of a light orange scarlet colour, stained at the base with pale green, forming a rge greenish white eye or centre ; the stamens are declinate of the same colour as the perianth, with llow pollen. Its free-flowering habit renders it very ornamental, spikes of its showy blossoms being undantly produced on small bulbs. 5*s.* and 7*s.* 6*d.*

AMARYLLIS RUTILA.

A very free-flowering variety, even small bulbs producing abundantly spikes of its showy orange d blossoms, which in some of the varieties are more brilliantly coloured, tending to scarlet. Instead showing a green funnel, as in *A. pyrrochroa*, each of the perianth segments has here a lance-shaped een bar, extending nearly half the length of the

AMARYLLIS VITTATA HARRISONIÆ.

A remarkably distinct and effective variety of Amaryllis, imported from Lima in Peru. It has a stout glaucous green scape, bearing a two-valved spathe, from which issue several (about five) pedicellate flowers, which are remarkable for their long narrow tubes, fully 3½ inches in length, the segments of which are slightly spreading at the tip, opaque waxy white, and marked on each of the six segments with two broad deep crimson lines, running a considerable distance down the tube. The flowers are sweet-scented, with a faint odour of *Daphne*. It has been awarded a First Class Certificate by the Floral Committee of the Royal Horticultural Society. 10*s*. 6*d*. and 15*s*.

AMARYLLIS.

This deservedly popular family cannot be too highly recommended. The ease with which they are cultivated and the gorgeously beautiful flowers they produce at almost any season, make them most desirable in any collection. By gradually drying the bulbs they can be put to rest at any time during the year, and then when flowers are required, if started in a gentle heat they develope their flower scapes, and quickly produce their large Lily-like blossoms, which are of various colours, generally embracing crimson, white, and red, scarlet, rose-flaked, striped white and crimson, with various shades of colours diversified.

Choice selections of good sorts, 3, 4 and 6 guineas per dozen.

AMARYLLIS BELLADONNA (The Belladonna Lily).

This beautiful hardy bulb is imported early in September, with its flower scapes almost ready to expand, and by the end of the month they are in full bloom, their large handsome white flowers richly flushed with rosy purple, rendering them extremely useful for greenhouse and conservatory decoration. 1*s.* and 1*s.* 6*d.* each.

BEGONIAS.

TUBEROUS-ROOTED SECTION.

The following novel and beautiful varieties will be found admirably adapted for the summer and autumn decoration of the Greenhouse and Conservatory; for they produce in the utmost profusion magnificent flowers of very large size, and great variety in colour. They do not require stove cultivation, but will succeed well in a Greenhouse. The tubers rest during the winter months, similar to Gloxinias, and can be easily re-started into growth in the spring. Their profuse flowering quality, and the charming variety of colour of their blossoms, render them extremely showy and effective. 3*s.* 6*d.*, 5*s.*, 7*s.* 6*d.* and 10*s.* 6*d.* each. Choice Selections made by Mr. W. B. at 30*s.*, 42*s.* and 60*s.* per dozen.

These could be sent in tin boxes, by post.

ROSANOWIA (BIGLANDULARIA).

This is a new genus of Gesneraceæ, with the habit of Seheeria and Locheria, nevertholess not belonging to the Aehimones tribe, but to the Ligeriæ. It is elosely allied to Sinningia (*Nees*) and Ligeria (*Dene*), having a tuberous rhizome, and a similarly-shaped eorolla, but both these genera have five perigynous glands, whilst Biglandnlaria has only two, in whieh respeet it differs also from every other known genus of the order. 2*s.* 6*d.* eaeh.

EUCODONIAS.

These exeeedingly pretty hybrid Gesneraeeous plants have nieely tinted ornamental foliage, and extremely beautiful flowers, whieh are freely produeed on small plants. The flowers are nearly the size and form of a drooping Gloxinia, but have the soft eolouring and elegant markings of some of the attraetive Tydæas. 1*s.* 6*d.* and 2*s.* 6*d.* eaeh, aeeording to sorts.

Nægelioides diamantina
—— lilaoinella
Nægelioides nana multiflora
Van Houttei.

GESNERAS (NÆGELIAS).

The value of Gesneras, as decorative plants, can scarcely be over-estimated. Most of them have rich velvet-like foliage, which, in the respective kinds, varies from green to crimson. If only grown for the foliage, they are very attractive, but during the winter they produce splendid pyramidal spikes of blossom, which are extremely handsome. Originally, however, the principal colour was orange scarlet; now, as the result of fertilisation, there are various colours and shades; added to which, the spotting on the flowers of some of the varieties is extremely pretty. 18*s.*, 24*s.* and 30*s.* per dozen, according to sorts.

PLECTOPOMAS.

This collection forms not only a new group of hybrids, but a novel class of Gesneraceæ; they are of free-growing branching habit, and produce profusely large showy flowers, of most attractive and varied colours. 1*s.* 6*d.*, 2*s.* 6*d.* and 3*s.* 6*d.* each, according to sorts. For descriptions, *vide* Mr. W. B.'s Plant Catalogue.

TYDÆAS.

These can be cultivated so as to produce an abundance of bloom throughout the winter, their flowering season principally depending on the time of year their tubers are started into growth. With a little management a succession of blooming plants can be had nearly throughout the year. 18*s.*, 24*s.* and 30*s.* per dozen, according to sorts.

AMORPHOPHALLUS CAMPANULATUS.

A most remarkable tuberous-rooted East Indian plant. The leaf-stalk is marked with pale spots; the leaf-blade is three-branched; the bell-shaped spathe is wavy at the margins, and measures some 15 inches in height and 2 feet in diameter at the widest portion; externally it is puce-coloured, dappled over with large white and smaller green spots; internally crimson purple, with a darker rim at the base. It is certainly one of the most extraordinary in the whole world of plants, and undoubtedly handsome. 5*s.* and 7*s.* 6*d.*

AMORPHOPHALLUS CAMPANULATUS ORNATUS.

,, **NOBILIS**, yellow 1

CRINUM BRACHYNEMA, an attractive species, producing fine large white flowers . . 7

CRINUM ORNATUM RUBRO-VITTATUM.

This beautiful Amaryllid, which has been imported from Brazil, somewhat resembles *C. ornatum* but the blossoms, instead of being striped and flushed with purple, are white with a rosy crimson ban along each segment. The brilliant and pleasing colouring, and the abundant flowers give the plant very ornamental character. 10*s.* 6*d.*

CRINUM PRATENSE, an exceedingly handsome species 15

CRINUM PRATENSE CANALICULATUM.

An interesting hothouse bulb, with slightly fragrant flowers, and large ovate bulbs; the leaves a channelled, gradually narrowing upwards, and scabrous at the edge; the scapes, are 15 inches high terminating in an umbel of about a dozen flowers, which issue from between a pair of ovate bracts, an are erect while in bud. The perianth has a slender tube, 4 inches long, pale green, and a limb of s linear-lanceolate spreading segments, 2½ inches long, and of a blush white colour, so that the flowe are nearly six inches across. The blossoms are extremely elegant, and useful for cutting. It has be introduced from India. 5*s.* each; 50*s.* per doz.

CUMMINGIA TRIMACULATA, half-hardy bulb, having numerous pretty bell-shaped blue flowers, with black and white spots 1

CYCLAMEN, *vide* page 8.

CYCLOBOTHRA ALBA (The *Alabaster Star Tulip* of California), white, bell-shaped flowers 2

URYCLES CUNNINGHAMI (*The Brisbane Lily*)	3	6
VALANTHUS NIVALIS (*Snowdrop*), *vide* page 8.		
VASTRONEMA SANGUINEUM, half-hardy plant, with brilliant scarlet flowers	5	0

GASTRONEMA SANGUINEUM FLAMMEUM.

This beautiful dwarf-growing Amaryllidaceous plant, imported from South Africa under the name of *Hæmanthus flammea*, is evidently a near ally of *Gastronema sanguineum* from the same country. It is, however, a well-marked variety, generally producing two-flowered instead of single-flowered scapes and

EUCHARIS CANDIDA.

No plant among my recent introductions has been so puzzling as this. It has been received fro one of my collectors in the United States of Columbia as a new species. On its flowering, howev it proves to be identical with the plant figured and described by Planchon as *Eucharis candida*. B the plant at present in cultivation as *E. candida* is not the same which Planchon figured. That no offered quite agrees with this figure; for, as well shown in Planchon's plate, it has ovate-oblong lon necked bulbs instead of small globular neckless bulbs, as in the plant now in gardens. The foliage the two plants is also altogether dissimilar, the true *E. candida* having a leaf with a long flat petiol and a broadly elliptic-acuminate curved blade, decurrent at the base. The scape is compresse bearing an umbel of several nodding flowers, which have a slender decurved tube about two inch long; the yellowish tinted corona funnel-shaped and projecting about an inch, the lobes sudden contracting into awl-shaped filaments.

ORIOSA (METHONICA) SUPERBA, the flowers of this tuberous-rooted plant are very handsome, and from their large size, and effective orange and scarlet colours, always attract considerable attention..... 3 6
OXINIA, *vide* page 22.

GODWINIA GIGAS.

his is the largest Aroid, both in leaf and flower, of which we have as yet any precise knowledge. vas discovered by Dr. B. Seemann, near to Javali mine, in the Chontàles Mountains of Nicaragua. roduces only a solitary leaf, and after that has died off, the flower spathe makes its appearance, both and spathe being of gigantic dimensions. The petiole has a beautifully mottled metallic surface, nstone yellow, barred and striped with purple, giving it the appearance of a snake standing erect. leaf-blade is green on both sides, and divided into three primary sections, which are again repeat- sub-divided. The flower spathe is of a thick leathery texture, outside of a dark bluish brown, and de of a dark brownish red, with the exception of the base and those parts surrounding the spadix, ch are whitish yellow. 10*s.* 6*d.* and 15*s.*

PTERODISCUS SPECIOSUS.

The tubers of this handsome flowering greenhouse perennial are quite dormant in the winter. The wers are large, with a funnel-shaped tube, and a spreading five-lobed limb of a beautiful lilac or red-sh purple colour, rendering the plant well worthy of cultivation for its ornamental qualities. It ers during the early part of the summer. It has large globose tuberous roots, the upper part of
